Abstract: This paper discusses the role of the state in the development of the economy. It argues that the state should play a leading role in the development of the economy, particularly in the areas of infrastructure, education, and health care. The paper also discusses the importance of the private sector in the development of the economy, and the need for a balanced approach to economic development.

Abstract

KING-SIZE

EMTJ Phase I ring any bells?

Maybe not, but it would sell off those alarm gauges, and you'll get to know it as well as your name, rank and serial number.

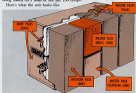

It sounds like...

EMERGENCY MEDICAL TREATMENT UNIT PHASE I

And let's be specific: your First Aid kit is not medical supplies to be used for wild and hobby-addict-like saving a nuclear attack or other mass casualty situation such as fire, flood or hurricane. It's for your use before the medics get there.

EMTJ Phase I contains a 72-hour supply of drugs-and-equipment that treats more of casualties among 100 guys. It comes in a 330-lb. cardboard box that's being issued on a basis of one per 100 troops.

Here's what the unit looks like.

The Emergency is EMTJ Phase I means just that. It's strictly for the immediate use of troops who have mass medical needs or for casualties resulting from a major disaster.

LIFE SAVER

To follow the rule of KITCHEN: KEEP YOUR OPTION FRIGID: BASH OUT IT—and make sure it's cold.

Keeping your head off the life or death cap is the first step you take off-duty if you head it—there's no help.

And up the life and you will see it's not a life with nothing of real value-like your life.

EMTJ Phase I lets your medical unit and stays that way: always for one on up... and you only.

First, and most important, when it's the end and you need what's in it is the First Aid in mass-casualty situations.

And second, under a regular hospital program, when qualified medical will work to make two things are help: shape and then read the case.

EMTJ Phase I is to be used in your unit only when you are given it and away.

It's your life insurance, in case it's with another living one.

Another word that it like you would

anything that can save your life. That said.

Just in case you've got some guys who think the box contains a head break every weapon, here's what's in the Phase I kit:

In addition to the wound, eye, ear, nose, throat and eye from your-all things-almost-ready-to-go to work it and where your people need it.

EMTJ Phase I is just the first step in the Army's Emergency Medical Care Program but it's the critical step and the one figured to take over when you can expect help or an direct medical help.

It's your support protection.

When you know and remember from your First Aid course given under Training-Guide 44-together with how you take care of your Emergency Medical Treatment Unit—way emergency go a long, long way in keeping you alive.

TOO MANY FEMALES?

A pair of females, at times, can spell real trouble, Right?

Specially when they're electrical terminals, supposed to get together in the job-box, to connect, one last without a male.

Like if females are being early models of the MTI machine gun mounted on the M40 tank... when you get to look up the MTI's manual being handed to the colonel, PGM 1004-774-1007, and find yourself staring at two female terminals.

Spare your sleep, man, 'cause something's not going to get 'em together. What you need is a patchcord with a pair of male terminals to solve the problem.

In this case it's colonel's order immediately, PGM 1004-774-1019. It was supposed to come with your machine gun package, but just in case it's lost, order an unpaired, loose supply for one and you'll be in business. Life's quick, that is.

The handy patchcord's not needed on the latest colonel, PGM 1004-601-0036, since the connector's designed to make the female without it.

SLIPPIN' THRU LOOPS OVER THE FEED COVER...

GUNNER-LOOK OUT

The feed cover on your M60 machine gun isn't supposed to swing open all the way when you turn the handle. In photos like it says—don't go leaving the handle, thinking the cover's stuck or something.

If you turn the handle more than 90 degrees you're likely to damage the latch spring, and then the cover won't stay shut when you start firing.

On the M60 all it takes to open the feed cover is a few more (back) on the handle. The handle will let go completely and the cover will take up a good crack. Then it's up to you to lift the cover the rest of the way to its fully opened position.

It's that simple. So pass the word: Never leave the handle go easy on the latch spring, and the feed cover will stay closed during firing.

And, guess you know, when the cover is in need of repair or replacement parts, your M60 goes to Ordnance for the change.

CUTTING CORNERS

So you've been having trouble with the buffer retaining plate on your M60 machine gun.

Like Fairlane... the yoke has a habit of popping out of the receiver when you open the machine gun cover.

The problem's being solved with the weapons that're coming off the production line by first making a small change in the yoke.

The change is right simple—just grinding end of the sharp corners on top of

the yoke.

Your support unit can do the same thing for you with the M60's you have by following these dimensions—

100

The authors are grateful to the referees for their helpful comments.

It seems that many NRIs there, who among vast up to India, have tended to begin without identifying them as to which order or not they came from—making for a hotted up situation.

Put together hangers from seven vehicles used at your site, mix well with the hangers from each of four other sites using the same storage area, etc., making sure 50 percent are not identified, and you'll get a slight idea of the job of partridge hawking in the ancient past.

To add to the confusion, huggies from several makers look alike and will fit several different sizes. Run, and pour this in your ear, a huggie will give up-
side suggestions only in the which is not designed to care.

Fire-matching is neither used in large quantities nor in a serious safety hazard as damage from this match has not been reported.

11. You even have to yell, you'd have to go through a physical trial and error system to mouth up your legs and teeth—throwing a lot of feigned curves and random lead time down the drain. Right?

The solution . . . *South Africa, Kenya, Myanmar*

And here's a clue that'll make the 80 problem a cinch—did you see your number 80?

[illegible]

YOUR ALPHABET KITS

A tool in the hand is worth two in the supply room—if you have the right tool. The right tool by the wrong name will do the job just as well—but cry and get it when you ask for it by the wrong name.

The only sure way to beat the confusion is to know what the tool looks like, what it's called and the right EM. And that goes for your Heavy Aircraft Oxygen (Aircraft Maintenance Tool) Kit.

Step 100 or 11 is your authorization to looking out or even of these kits:

EM 3		EM 100-225-494
EM 3 Supplemental		EM 100-225-494
EM 8		EM 100-225-494
EM 1		EM 100-225-494

These kits are under the implicit responsibility of the Transportation Corps.

There are a few things to keep in mind when you're checking your kit. Some of the tools you'll find may not look exactly like the ones listed here. That's because some tools are made by different manufacturers, but they should look close to 100 in the tool shown here to give you an idea of what to look for.

When TC issues their EM on this tool set, they say its number will be EM 100-225-494. This set is currently listed in EM 100-225-494.

Now that you have the facts, here's what you look for:

Q67

THESE RESULTS INDICATE THAT THE EFFECT OF THE
INFORMATION ON THE DECISION TO INVEST IS
POSITIVE AND SIGNIFICANT.

1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 26

Numbers show names of items show how many you need for each MITZ. Plus these pages: TM 5-4001 (10 Dec 91), LD 5-2110-2111-10 (21 Aug 90) and a vehicle control jacket, EA Form 478.

A few of these OSM items... the

which, the and also, Freeman... are found in Ord 7.8 (SL 12797 (10 Jan 90) and all are on top for those that need 'em.

To try this list, maybe it'll put a face under the smile of your supply wrangler.

Surge that'll have

Did you ever flip the switch to light up the four lamps on your M100 game remote telephone so you could do some cheating from your trucked vehicle... and find out nothing happens?

There're different reasons for the lamps not lighting... and one good bet is that you didn't do things in the right order. Like Freeman, turning on the vehicle's master switch while the switch for the lamps is on. The quick surge that flows into the lamps can burn them out.

So... play it smart. Make sure the switch for the lamps is off before you turn on the master switch.

Wreck proper disposed

Whenever you're towing a trailer (no matter which one's making you pick up two trip tickets (DD Form 118, Vehicle and Equipment Operational Record).

YOU NEED:

One for the vehicle you're towing and:

One for the vehicle you're towing. . .
B, via, third, you might find you're not
been properly disposed.

Could be you'll run into some people who'll tell you stop get along line on one trip ticket when they're towing. Could be they're just plain lucky, too. Think what a load they'd be in if their trailer's ever involved in an accident, or they have serious trailer breakdown

— or, tougher, yet — if the spot-check team finds them during a haul.

TM 9-2818 (page 26) says every operator of a wheeled motor vehicle is required to have a properly maintained DD-118 as official authorization for operating a vehicle, except under Operation TAPLR.

If anybody thinks that doesn't include trailers, tell 'em to check AR 600.10, "Registration of Motor Vehicles." It clearly lists trailers as motor vehicles.

Last, but most important—like with any other vehicle, to keep a trailer in good operating condition, you need PM and operating information.

It's sure tough for you to report a trailer's trip history and its individual PM on the DD-118 assigned to the towing vehicle.

The trailer's a separate piece of equipment, and besides, its maintenance needs are different. So why make problems?

The answer's easy . . . sharing normal operations a trailer needs, describes, and must have its own trip ticket.

Made in 1947

Now you can learn the story from about sharing . . . easy like, How, and when, and with what you do is it easy and clearly told by TF 17-2044 (4 Apr 61), "Sharing Tactical Vehicles."

The Handbook shows how to make sure that tracked vehicles are always prepared to share (as to be stored), and correct sharing techniques from records. It shows, by the numbers, how to run a tracked vehicle with a cracked vehi-

cle, a wheeled vehicle with a wheeled vehicle, and a wheeled one with a tracked one.

The list's recommended for all kinds of units concerned with maintenance and operation of tactical vehicles.

TF 17-2044 is available from your line and equipment exchange.

Shorten the backwing

The more backwing you've got, the harder you can hit.... If you want to stay a backwing.

But that's just what you don't want with those safety catches under your hands on G742 and G744-series models.

SAFETY CATCH

Safety catches on early production models swing back too far... unless their tops have been flattened. And when a catch swings too far, it'll hit

the top bar of the radiator guard as it comes down... then rebound from the rim of the radiator, chewing it up a few you well.

So, if your model safety catch has too much backwing, shorten its swing like you did of TH 5-0023 117 (see 14) with you for the G742-model or like it says in TH 5-0027-11 114 (see 15) for the G744-model.

Here's how: Take the catch off the head and put it in a vise. Tap it with a ballpoint hammer till you flatten the

modified top onto the wings on G742 swing back against the center field in the headbar. Square the wings in the vice till it opens with a smooth swing. Then replace the catch on the head.

That'll stop a lot of chewing.

and with it came the beginnings of society as we know it...

And so, the Valley of GIBO brimmed with activity. Almost as if by magic the most advanced concepts were grappled with—and used.

Indeed, such activities, working in perfect harmony with the other produced marvels of engineering and manufacture, the principles of which are employed today.

† L. Arthur Steinhilber, "Early-Earth activities and their counterparts", 1982.

It was not long before the ARMY of the Valley of GLEN stood fully equipped, probably to the great relief of the GUINCKS whose taxes paid for it all.

The troops then in garrison, settled down for a few years' while the Valley Folk tilted the rich glacial soil¹ and prospered.

Early seasons came and went.

And after each the snow... and wind.

It was not until the hot sun of a dry summer began to wane that the first signs of trouble appeared.

¹ Misting "the loam" is the "Mist-tilled" which the monks say is one of their weapons contributed to attack.

ONLY WHEN NECESSARY

Dear Half-Mast,

Is it necessary to tear down 100-mm and 121-mm howitzers annually if there's nothing wrong with them?

I've been told that they should be completely sawn down, inspected and re-assembled annually, whether they need it or not. I can't see this being done unless Ordnance maintenance personnel think it's necessary.

It sure seems like a waste of time and money unless the equipment really needs to be replaced. Can you give me some authority to back me up, if I'm right?

SFC R. F. J.

Dear SFC R. F. J.,

You'll never be more right if you live to be 100, Sarge.

Like you said, tearing down a howitzer, or any equipment for that matter, that's in good shape is a waste of time and money and is strictly for the birds.

Army policy now calls for tearing down equipment only when inspections and tests point out you've gotta disassemble it to make needed repairs. And, any equipment that's in good working

order doesn't get torn down or disassembled for preventive maintenance reasons unless it's spelled out that way first and clear in the TM.

The policy is based on the idea of **TRC&M—Inspect, Repair Only As Necessary**—and it applies to all vehicles of maintenance.

Para 34 of TM 750-1 (14 Sep 61) gives you the official word on TRC&M.

Half-Mast

GAS TANKER VARIETIES

Dear Staff-Mag,

How many types of M43-series gas tankers does the Army have? And how can we tell which we've got?

It seems the M43's and M43C's with winches got different PIN's from those that don't have 'em. But there are you tell which tankers are supposed to have jacks, air and electrical connections, and gas regulator units?

Sometimes they're different, even when they have the same PIN.

Sgt. F. E. B.

Dear Sergeant F. E. B.

Maybe don't give you the answer if you think it repeats your earlier line plans... and TM 9-4000 (17 Dec 54).

First, the winch-equipped M43 is PIN 2320-821-0541. Without a winch, the M43 is PIN 2320-821-0541.

The M43C that's winch-equipped is PIN 2320-44-0217.

The M43C without a winch is PIN 2320-44-0215.

CMSG MSG 30000 HQ.

M43's that were used to service aircraft had the gas regulator kit installed by AFMAG Det G1-W59 (7 Feb 55), so you may find the M43 with or without the regulator, depending on how it's used.

TM 9-1408-170-0541 (10 July 1961), tells about maintenance on the gas regulator.

Here's the history of changes to the M43 tankers.

Working with Serial No. M45081, the filter was removed from the left exhaust, a change made in the water separator element, and steel nut washers used in the water separator were installed.

Maybe this, along with a look at TM 15-1115-124 Sept 52, on rubber expansion, will help to match up your tankers with the right parts.

Other models M448 and M449 gas tanker tankers will need the exhaust filter when you've had M7942 9-1588-117-82 18 Jan 54 applied. Tankers starting with Serial No. M45081 (Humboldt or Carlin, Wright) or No. 148700 (Kear) don't need the exhaust filter, because they got factory-built changes in pipes and motors. Note this when you're using TR 9-2300-229-08/1 149 Jul 61.

RAY
RAY
RAY

THAT SAFETY MANUAL

Dear Ray-Med,

Here in our auxiliary group we have a continuing reference to O&M 7-224, the Ordnance Safety Manual, and yet we do not have this manual. And we've got to do it, it's really a bind.

It's important to us, but the answer came back, "Not authorized a unit of your type."

What can we do?

LT. P. R. C.

Dear Lieutenant P. R. C.,

Many units are having the same problem as yours and I think it's due to a misunderstanding.

This Ordnance Safety Manual is published by the Ordnance Corps for Ordnance individual units directly under the command of the Chief of Ordnance (like Ordnance armaments, Ordnance depots, Ordnance proving grounds, etc.), and is not available for distribution outside the Ordnance Corps.

When a major unit commander is

the field duty director for the information in the Ordnance Safety Manual he will, he usually does it by a total RCP and provides copies or reproductions.

This same rule applies to safety manuals issued by other staff services.

Department of the Army safety instructions are published in AR's of the 581 series and TM's. TR 15-1081 specifically applies to ammunition and explosives.

“DEAD” LIVE TRACK

Dear Half-Mast,

Can you get a “dead” track with the TMS type that’s an over 100mm MOD dimension?

To settle a bet, where can we get the data on this?

Exp. S. G.

Dear Sergeant E. G.,

That track's known as a “live link” type, but you may not get a “dead” link or pad if you’ve got a worn rubber bushing or a broken track pin. It’s unlikely that you’d keep going, tho, if the whole track is “dead.”

You can read the specs on this in parts 1M(1)(g) and 2M(1)(c) of TM 9-25.30-200-14 (17 Aug 58).

And if you can't arrange a copy of the TM for the M41 tank, TM 9-25.30-200-12 (29 Jul 58), you can check on how this live link track's built. Para 2-26(4) tells you that links in this type of track are connected at a 134-degree angle. If two links fit flat when connected, use a “dead”—maybe both.

Half-Mast

TO EACH HIS OWN

Dear Half-Mast,

There seem to be several different opinions about the proper unit markings on trailers.

Some say give the trailer the same number as the towing vehicle; others say it gets a number all its own; and others say give it the same number as the towing vehicle but add a “T” to denote trailer. Which is the right way?

WFO-C, M. O.

Dear Mr. C. M. O.,

According to AR 700-108-1, the vehicle number will be the sequence number of the vehicle in the normal order of march within the unit to which it is assigned.

Since your trailer is a vehicle, then you give it the next number after the number of the track that's pulling it.

NO KIT - BIT BY BIT

Maybe you've had a run-in with those Federal electrical connectors on your equipment's waterproof electrical system, and you've been wondering how you can order a repair kit.

To make it easy, many manufacturers' individual parts kits are ordered as separate items.

Before going through the list, we pick out the predominant, but not when we check, though don't help with the connector's features.

1. Pick out the right parts to go with the plug wire hole size (1/4, 1/2, 3/4, 1, 1 1/2, 2, 3, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84, 86, 88, 90, 92, 94, 96, 98, 100, 102, 104, 106, 108, 110, 112, 114, 116, 118, 120, 122, 124, 126, 128, 130, 132, 134, 136, 138, 140, 142, 144, 146, THE UNIVERSITY OF CHICAGO

Items of the paper in EN 73, pages 14-15 and built-up. The use of 500 compound more formally known as building compound, National Spec. 901.1-1000, is required.

The staff comes in slightly handy when parking or riding off the bike. The wheel slips through the shell casing and makes for a more waterproof case. With a tie removed around the neck

shell before it connects to the remote shell and makes some other connecting up and when it comes to disconnecting there it's also some work.

The proposed administrative supply system will be implemented by the end of 1999.

DOUBLE CONNECTION

THE UNIVERSITY OF CHICAGO

BOOK REVIEW

www.elsevier.com/locate/jmb

Give you don't have the limiting compound around, might try the reaction at 20°C 100-200 mmHg (approx) based on the Diels-Alder adduct.

If pulling on the wires won't do the trick of separating the shells, don't get too hounding 'em up and down, but, rather try inserting something, down between the two shell-ventral flaps and pry gently until they can be pulled apart. Usually (as with ease) is a good means to follow when these quick-shedders are in the shrimp.

Well, take a real close look at "Northern Operations" as spelled out in FM 31-71 (June 80) and the "Basic Cold Weather Manual" FM 31-70 (Feb 81). They've got a lot of info for you on cold weather care of all your gear... from your M1 rifle to your women's pickup skis.

You might also like to check TM 9-207 (Sept 80) on "Operation and Maintenance of Cold-Weather Manual in Extreme Cold Weather" and TM 9-400 (June 82) on "Arctic Construction." Not to mention "Winterization Techniques for Engine Equipment" in TB 1940 107 (4 Dec 81) and TB 1940 108 (5 Dec 81), explaining several problems in your vehicles.

Then of course your TB's on each piece of equipment will include some useful info on cold weather operations.

Take a long look at some of these personal gear picks:

TB 1940 21 (14 Dec 81) and TB 1940 107 (8 Jul 81) on load-carrying equipment, TB 1940 78 (16 Nov 81) on jackets and coveralls, TB 1940 96 (18 Aug 81) on sleeping bags, TB 1940 100

121 (Sept 80) on climbing equipment and TB 1940 120 (18 Feb 81) on skis, snowshoes and other snow-country equipment.

Backing up your clothing and equipment TB's are TA 10 (19 June 81), TA 104 (Dec 81) and TM 31-11 (29 May 81). Then there's TM 18-175 (9 Apr 80) on use of cold weather clothing and sleeping equipment.

TM 18-126 (18 Mar 82), TM 10-711 (14 Feb 81) and TM 10-761 (9 Jul 81) cover your tent needs and field stoves... RM 20-15 (9 Jan 81) is the story on tents and tent pitching.

For some really deep reading on the entire subject, you can look around for DA Forms 70-1 (15 Aug 81), 70-2 (15 Mar 81) and 70-3 (15 Aug 81), which are Volumes 1 to 3 of "The Polar Bibliography" containing cold weather info on equipment performance, operational techniques, experiments and more.

LET'S
COMMUNICATE

ARE YOU
AFTER MY CAR
BEHIND MY
GARAGE?

NO DULL, SICKENING THUDS

Flying means equipment!

Not really, but sometimes your car will take off by itself.

This happens when you forget to lock the handles on the car's mounting ... whether it's an MT-100VGR, MT-100VGR, or MT-50TACR.

Then, the first time you run your jump or take downcountry or stand on the handles, off flies the car! Yikes. It's not a very pleasant flight because you know it'll end with a crash ... on the floor or over the side. And sometimes somebody gets hurt! (Not before the landing.)

In any event, you can count on something going deeply for awhile. Either the mounting's power cables or cords or the car's suspension will be strung.

It's easy to make sure your car keeps its place. As the TBI says:

Just pull the locking levers (one at the end of the "100", two on the "100" and seven on the "100") out and to the right in a circular motion.

And, when hooking the receiver-transmitter RT-000000 to the lower phone amplifier, just snap the receiver and hook on both ends.

WITH YOUR COMING SHIRTLESS.

AS HOT AS
THE SUN,
YOUR SHIRTLESS
BODY
WILL BE
HOTTER.

SAD BEGINNING—GLAD ENDING

"LOOK OUT... HOLD IT... TO
THE RIGHT... WAIT... WAIT...
WAIT!"

WHEE! (a) whee! (a) whee! (a)

All right. It's not bad, now. Get the
idea.

And so mark the sad beginning
of our story.

It's all about 5.144/70 and 5.144/90
showered equipment shakers that suffer
this phenomenon during routine main-
tenance. Happens when they hang-around
a facility any while being swung up
into their down-and-half... or rather
downer in one of many other ways.

Which really is helpful, of course, but
which can—and should—be fixed.

So always be sure your patching kit
are ready and handy. And since they
won't be included with the new shakers,
you have to requisition them separately.
The formal name is Patch Kit, for
Shakers, Showered Equipment, PSE
5.144/70-5.144/90.

Buyer's cataloged as a
one-40 per configuration table.

Shaker Type	Capacity and Weight Configurations
5.144/5	50,000/5
5.144/6	50,000/6
5.144/7	50,000/7
5.144/8	50,000/8
5.144/9	50,000/9
5.144/10	50,000/10
5.144/11	50,000/11
5.144/12	50,000/12
5.144/13	50,000/13
5.144/14	50,000/14
5.144/15	50,000/15
5.144/16	50,000/16
5.144/17	50,000/17
5.144/18	50,000/18

Whe is, a man can stop a rugged,
weather-proof patch on the aluminum
wall of his line that'll provide a surface
maybe rougher than the wall itself. No
need to patch it, either, since the patch
drives on an OED roller.

All instructions, of course, are right
there in the kit. Naturally, you'll want
to keep the kit as close as possible down
from your way, way down on the 50 of
the 50th wheel in the kit.

TAUT FOR TODAY

Yep, that's the thought: taut.
And it takes the perfect today, to-
morrow, and any time you're working
a custom shaker to its 54-ton or down-
and-a-half truck.

Whether it's a 5.144/5 or 5.144/10
or 5.144/15 shaker—or any of the others.
Naturally, a crew wants the kit as
as right as the vehicle, and the new

lookies on the shaker are just the thing
to provide a good fit. But there's a little
more of making the shaker new right.

Since that one made really applied
to the shaker's will produce a sure
on the wheel... by actually looking
the frame of the shaker. That's right.
It's possible to make an enough four-
pound of pressure to hold the beam.

So, that's the word.

When you're working a shaker on the
bed of a truck, take up on the five ton-
lookies as right as possible by hand.
Then take 'em up another half-ton or
more things just right.

Use a shill, too, or what have you, to
do the job. Just slip it through each
available the leverage, and make the
new half-ton.

PROPER PLUG PRESSURE, PLEASE

POWER-IN or POWER-OUT.

Well, whichever way your plug connector is cramping the current—in or out—it's got one thing in common with just about every similar plug: It's just about every other piece of common equipment.

It has to be screwed up just right. Not too loose . . . not too tight.

The slanted hole in the center of these plugs is put there to accept the screw in the center of the cable connector. And when the connector is snugged up dead-right with the horizontally wings, your power is ready to flow.

But not all have one thing in mind. These plug connectors are not to solid a part of the control panel and chassis as they might look. In fact, they themselves are plugged in. And screw, or no screw, as a connecting link 'twixt wire and chassis.

So when you screw in the cable connector, you're only screwing into the plug connector—and not directly into the chassis itself. That slanted hole does not cut inside the chassis, but inside the plug.

Any strong-arm technique in rightening the way will never use purpose—but deliver accident. It'll put them together for sure, but could wrench the plug connector loose from the chassis.

That means trouble when you tighten could really bend and break inside connections . . . repeat wiring circuits . . . and lead to a loose and maybe missing plug.

Firm but not too firm, then, is the PM message for rightening up on these plugs.

STICKY OR NO STICKY

Learning to ski, with a safety problem, isn't covered for some people.

The name of the Peck-A-Joe's is interesting to those who know "monthly" is old-fashioned.

The modifications and calibration details inside their Raytheon-Transmation RT-150 (150°) just don't stick. It seems the device-RTN's T500-250-1000 and 1000-250-1000-can't be moved much more than a year. After that their subject, looking for a new device.

The best way to keep this from happening is to respire only as many as you have on you, not cloth over.

These details on the outside don't always get TIC coaches being cared for; they must be kept from perching, wandering, or being worn off. You can give 'em the protection with a light coat of Varidol, medium and finger-resistant. GALL-N-ETS: PSM 8818-864-4747 (Hess).

GO FORTH

ETC's thorough list lists a lot of remodeling parts that must be removed with full access.

But there's one—big difference between the 1990s and the 2000s—few demands were made.

It's made of brass, and it can be knocked out of line by the slightest bump. And you won't be able to look out the window.

The only way to guard against this is by being real careful and treating that little consumer as if it was your own.

YOUR SB-86/P MANUAL TELEPHONE SWITCHBOARD

Revised

Field 17. No need to make for error. This booklet should with you another step in working through your SB-86/P manual telephone installation.

Top priority is your training, so the crew may be. Shortcuts will keep coming through only as long as your installation gets in the way of PM. This final check-points can help head in that chain.

HANDSET-HEADSET H-91/U

Before making your symbols on the switchboard's main panel, take a guide to the outside of the main assembly. Check for any items in hand. No matter how slight they may appear, they can be major trouble do inside if your switchboard gets caught in an unexpected disruption.

While making the checks, remember the items in bold type are red warning and should be corrected before you start putting plugs again.

SWITCHBOARD SIGNAL ASSEMBLY TA-207/P (FIELD JACK SECTION)

MANUAL TELEPHONE SWITCHBOARD SECTION SB-245/P (KEYSHELF SECTION)

WELDERS, WATCH IT!

Maybe your welders don't know it, but you should keep an eye on the location of your chloride ion welder when you're using it. Could be that it's doing you dirt without your knowing it.

How so? If there are chlorinated solvents such as carbon tetrachloride tri-chloroethylene near by, the electric-arc rays from the arc can act on the vapors from the chlorinated solvent to form highly poisonous phosgene gas.

Phosgene is irritating to the lungs and can cause serious lung damage.

You can't tell right away just how much damage the phosgene has done because the full effect usually won't show up until three or four hours after you've been exposed to it.

To play it safe, keep solvents canisters closed and out of the way when you do any welding. It's best not to take a chance with cans that you think might be empty. Keep them out of the way too.

Any material that has been degreased with this type of solvent should be checked to remove any trace of it before welding.

And keep the welding away from any degreasing operations. If it's a large scale degreasing operation, the electric arc welder should be at least 50 feet away from it.

M241 PORTABLE FLAME THROWER

Too heavy and bulky remember?

Your M241 portable flame thrower is now due a hydraulic pressure test every six months. And, perhaps even more often—if you're using it real regularly.

This kind of pressure-testing business, as you know, is a chore for the Chemical maintenance support people, so you'll be hearing from them as it matures.

They'll put your portable's test tank, hose and gun through a pressure test

of 121 PSI, and its pressure tank will be tested to 3,000 PSI.

The six-month test applies to all M241's in the field, and those in depot maintenance won't be immune till they get government tested. Read all about it in Change 3 to TM 3-576.

And, here's another good reminder: When you're getting set up for a practice run with the M241, always check your readily CO₂ for outgassing... say 'em out... before you fire the M241.

GRABBY OUT THE ROAD...
BE YOUR OWN INSPECTOR GEN...

YOUR ROAD GRADER

Your essential road grader is a right handy item of equipment to have at your command.

Come summer or winter, it's your answer to road-clearing chores... whether it's smoothing out a wellbeaten road, coating a drainage ditch, making up a bridge approach, or clearing the way through a snow-blocked highway.

Keeping it in ready-to-go shape is the first step in getting your job done. And, your PM service should take care of that.

At the same time, this regular preventive maintenance will keep you a couple of jumps ahead of the inspectors and will give you gip-proof rig.

The real serious conditions—in **bold type**—will make your equipment unsafe to operate or will cause additional damage to your rig when it's operated.

Here's a rundown on your Hyster/Walker grader, Model 4D. You can use it to check out the grader in your yard.

GENERAL

ART CLARENCE - Locally married. Unemployed. 20 years old high, 160 lbs. Possesses a 1/2. Chained to the wall.

[illegible]

WILKINSON, David—*Carol Ann*
Age: 10 School: San Diego Academy
Home City: San Diego, California

CONTROLS, INSTRUMENTS

PANEL LIGHT —
Dim, missing,
cracked, dimed.
Reflector,
burned out.

WIRING,
cable **CRACK** —
Contacts, con-
nections loose,
corroded, loosely
mounted, broken.

GAUGE — Cracked,
broken, missing glass,
needle missing.
Wrong reading. Oil
Pressure Gauge —
Should read 10-60
PSI when operating.
Water Temperature
Gauge — Should show
160°-180° F when op-
erating. Fuel Pressure
Gauge — Needle should
move to "Green" life
when started, then
move to "Full".

METERS — Cracked,
broken, missing glass,
needle missing.
Wrong reading. Hour-
meter — should record
hours of operation. In-
meter — should show
reading in "Charge"
range.

SWITCHES — Falls in
line, drops. Worn in-
lay. Broken, bent, in-
sulated. Improper adjust-
ment.

SERVICE BRAKE —
Leak, squeals, falls.
Leak in hydraulic sys-
tem. Drump, worn,
dirty lining. Not ad-
justed properly.

MASTER CLUTCH —
Slips. Connect-
ing pins, buffer
overstroke
long, bind.

LEVER, PISTON —
Rust, dam-
aged, missing,
loose pins, nuts,
bolts, cotter pins.

CONTROLS, LINKAGES —
Excessively damaged.
Missing, loose pins, cot-
ter, nuts, bolts, cotter pins,
locks. Linkage bind, bent.

EARTH-WORKING ATTACHMENTS

BLADE — Defective hydra-
lic make. Defective main
line pistons. Improper ad-
justment of wear plate.
Not tilted properly. Loose
sleeve life, vertical clip.
Cracks, breaks, distorted.

SCAPER — Loose, missing
mounting bolts. Cracks,
breaks. Excessively worn,
damaged teeth. Defective
drum cylinder, lift arm
assembly.

BULDOZER — Cracks,
chips. Cutting edge, not
life eroded, excessively
worn, loosely mounted.

Connie Rodd's BRIEFS

He messes with CP 30's

If you've been looking your CP 30's (the outgassing test gas) like I did, you can relax now. The cylinders are NOT combustible and they can stand up to heat as good as any other outgassing. But you DO want to make sure they're not recharged with CO₂ by mistake . . . and they should not be re-charged by CO₂ facilities. Later tests seem to indicate that's what caused the earlier trouble. And remember the safety clip designed for the CP 30's is the only one to be used.

Same story--now, 58

PS 104 explained the aircraft modification 58 story, according to 58 U. 15.P., dated 28 February 1964. The story hasn't changed much, but it's spelled out much clearer in the latest 58 of the same number. This one's dated 18 August 1965.

Radioless periscope

Some recently issued AM tank bulletins 106, PS413 990.818.1 900, for M48 series tanks, included the M1441 periscope. If you got one of these scopes, give it back. You need it like a hole in the head. The M1441 periscope won't fit your tank. Use the M27 periscope which fits your M48 COM.

M103 All tank topic

On the M103's 120-mm gun tank you don't use the commander's control handle if the gunner's control handle wiring harness is disconnected. If you find it you couldn't control the movement of the gun or turret. TM 9-2130-21 & 30 (let 30) has the dope on this on page 56.

Frozen batteries?

Frozen batteries in a vehicle spell L.A.O.A.B.E. Gradually thawing them out like it says to in TM 9-6140-200-13 (July 58) might save them. A better way is to keep them charged. A fully charged battery can take 50 degrees below zero weather without freezing, but a not-does battery might freeze at 21° above zero. Check the charge in your batteries now . . . it might save you some real grief.

Repair limits

Repair limits based on age now are listed in AM 718-2100-7 (31 Jan 67) for most military transport vehicles. AM 720-2100-11 covers the new M131 1/2-ton truck, and lists for towed vehicles are in AM 730-2100-8. And, to get the full story, you'll need AM 743-2100-1 or change the Change 4 to for 5's.
