

THE PREVENTIVE MAINTENANCE MONTHLY

TB 43-PS-719

Approved for Public Release; Distribution is Unlimited

IF IN DOUBT, GIVE PS A SHOUT!

ONE OF THE
COOLEST THINGS
ABOUT PS IS OUR
READER LOYALTY,
SOME OF YOU KEEP
YOUR OWN PS
COLLECTIONS GOING
BACK MANY YEARS,
THAT'S GREAT!

ANOTHER THING THAT AMAZES ME IS HOW LONG SOME OF YOU HANG ON TO CERTAIN ARTICLES, WE'RE TALKING YEARS HERE, TOO. NOW AND THEN, I GET LETTERS REFERENCING PS ARTICLES THAT STRETCH INTO THE DISTANT PAST.

THE ARMY IS CHANGING **FASTER** THAN EVER. OUR OLDER ARTICLES WERE VALID AT THE TIME THEY RAN, BUT PROCEDURES AND PUBLICATIONS CHANGE, AND SOMETIMES THE CHANGES ARE **MAJOR**.

SO IF YOU'RE
HANGING ONTO
OLD PS ARTICLES
FOR NOSTALGIA'S
SAKE, OR SIMPLY
TO ADMIRE MY
HANDSOME MUG,
NO PROBLEM.

BUT IF YOU'RE

REFERENCING THEM FOR TECHNICAL INSTRUCTIONS, BE CAREFUL!

IF THERE'S ANY CHANCE SOMETHING MIGHT HAVE CHANGED, THE SAFEST BET IS TO CHECK YOUR TM OR ASK ME. YOU CAN CHECK FOR NEWER ARTICLES USING OUR SEARCH ENGINE AT: https://www.logsa.army.mil/psmag/searchForm.cfm

YOU CAN ALSO ASK US TO DO AN UPDATED ARTICLE ON A SPECIFIC SUBJECT. DROP ME A LINE AT:

half.mast@us.army.mil

ISSUE 719 OCTOBER 2012

TB 43-PS-719, The Preventive Maintenance Monthly, is an official publication of the Department of the Army, providing information for all Soldiers assigned to combat and combat support units and all Soldiers with unit maintenance and supply duties. All information published has been reviewed and approved by the agency responsible for the equipment, publication or policy discussed. Application of the information is optional with the user. Masculine pronouns may refer to both genders. The use of product or company names does not constitute endorsement of those products, services or companies by the U.S. Army. The use of non-DoD hyperlinks, along with their content, does not constitute endorsement by DoD or DA. Neither DoD nor DA exercises any editorial control over, and cannot vouch for, content on non-DoD websites.

PS, The Preventive Maintenance Monthly (ISSN 0475-2953) is published monthly by the Department of the Army, Redstone Arsenal, AL 35898-5000. Periodical postage is paid at the Huntsville, AL post office and at additional mailing offices. Postmaster: Send address changes to PS. The Preventive Maintenance Monthly. USAMC LOGSA (AMXLS-GP). 5307 Sparkman Circle. Redstone Arsenal, AL 35898-5000.

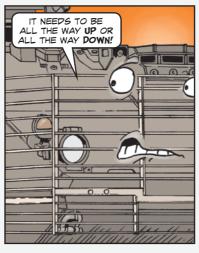

RAMP BASICS

ARE CRITICAL!

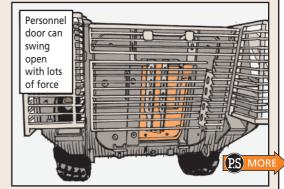

- Tap the horn twice and then wait a few seconds before raising or lowering the ramp. That gives others a warning and enough time to get out of the way.
- Before closing the ramp, make sure the vehicle has enough air pressure built up. It needs to be above 60 psi without slat armor and above 90 psi with slat armor. If the air pressure's low, the ramp locks may not engage completely. Check to make sure the ramp open LED goes out.

If you're closing the ramp from the squad compartment, make sure the cam locks rotate all the way to the closed position.

- A Stryker facing downhill on a slope of more than 15° may need a push from inside the vehicle to help the ramp start opening, especially if slat armor is installed.
- When the vehicle is parked facing an uphill incline, be very careful when opening the ramp's personnel door, especially if slat armor is installed.

The door can swing open suddenly when the latch is released. A few Soldiers have been nearly crushed between the door and the slat armor that covers the right fuel tank cap!

PS 719 2 OCT 12

 You cannot lower the ramp fully if the tow pintle is installed. It juts out enough that the ramp will hit and bend the pintle shaft.

Until it's actually needed, remove and stow the pintle and replace it with the pintle plug, NSN 5340-20-001-0203. That keeps dirt and moisture out of the vehicle. You'll also need an O-ring, NSN 5331-00-585-1068, and a lock pin, NSN 5315-01-328-5286, to install the plug properly.

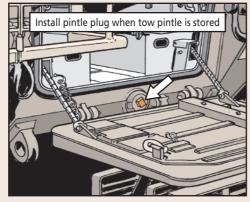

Note that this information is for flat-bottomed Strykers, not the newly fielded double V-hulled (DVH) vehicles. These parts will not fit DVH Strykers.

 If the ramp is slow or balky, it could be a sign of hydraulic problems. Open the rear service hatch and eyeball the vertical tube at the back. If the fluid is ¹/₄ to ¹/₂ full in the tube, the hydraulic level is OK.

If the hydraulic level is too high (above ½ full), hydraulic seals will blow. Too low (below ¼ full) and you'll have trouble raising and lowering the ramp. The annunciator panel should flash and sound if the hydraulic fluid drops below 6 ½ gallons.

 Never exceed the load capacity for the ramp and ramp door. The ramp chains may stretch or break and you can ruin the hydraulics. The ramp door seal or hinges could be damaged.

With slat armor, the ramp's load capacity is 1,000 pounds and the door's load capacity is 500 pounds.

Level above ¹/₂ full can blow seals!

 Always raise or lower the ramp completely. Don't lower the ramp partially to give Soldiers a seat or to carry equipment, especially when slat armor is installed. Just leaving the ramp partially opened for a while can stretch the chains. Extra weight from you and your buddies just makes it worse.

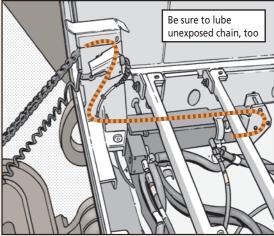

And make sure you open and close the ramp smoothly. Flipping the ramp switch up and down will make the ramp jump and jerk as it moves. That puts extra strain on the hydraulic rams and can blow the seals.

 Remove any water buildup under the floor plates, then have your mechanic give the ramp chains a light coat of GAA semiannually to prevent rust.

Sometimes only the portion of the chain that shows when the ramp is down gets lubed. There's quite a bit more wrapped around the pulleys and hidden beneath the floor plates. So make sure he lubes all of the chain.

 Give the ramp chain pulleys a few shots of GAA, too. A wellgreased ramp chain won't do much good if the pulleys seize up. There's a lube point at the top and bottom of both housings holding the pulleys. The bottom ones are easy to miss.

PS 719 5 OCT 12

Clean the shock absorber sight glass on an M1-series tank the wrong way and you'll see damage beyond belief.

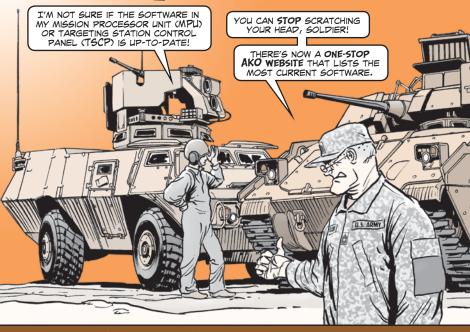

That's because the wrong cleaning method scratches and clouds the sight glass surface. Then figuring out the oil level is a shot in the dark.

Never use wire brushes, knife blades or screwdrivers to clean the glass. All you need is your hand, a little water and a piece of clean cloth.

So avoid the rough stuff. Keep that "eye" open and you'll see what you've been missing!

Software Updates a Breeze on AKO

IF YOUR SOFTWARE HAPPENS TO BE OUT-OF-DATE, YOU CAN DOWNLOAD AND BURN THE NEW MISSION LOADER/VERIFIER (MLV) SOFTWARE FILES TO A CD FOR INSTALLATION ON YOUR MPU AND TSCP. JUST GO TO:

M777A2 Towed Howitzer...

AN INCIDENT INVOLVING ACCIDENTAL PROPELLANT IGNITION **DURING AN** M777A2 HOWITZER FIRE MISSION HAS RESULTED IN SOME CHANGES TO PARA 2-30 OF TM 9-1025-215-10 (MAY 10, W/CH 1, FEB 11),

JUST BEFORE STEP 30 ON PAGE 2-166 ADD THIS

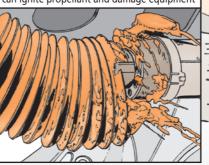

WARNING ...

WARNING

Crewman must swab the bore after each round fired to clear chamber of hot embers. Failure to swab the bore after each round fired may cause explosion or fire outside the breech area and cause injury or death to personnel and damage equipment.

Forgetting to swab bore after each round can ignite propellant and damage equipment

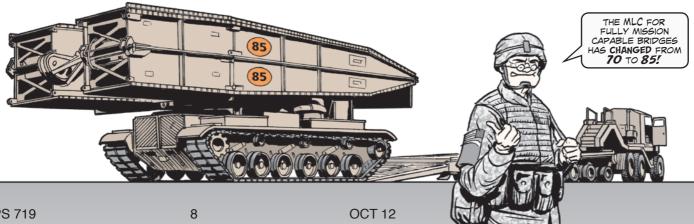

HERE ARE FOUR OTHER CHANGES YOU NEED TO MAKE RIGHT AFTER THE NEW WARNING

KEEP 'EM HANDY UNTIL THE TM IS UPPATED!

- 1. Change Step 30 to: Cannoneer No. 2 swabs powder chamber, spindle assembly, and gas check seat using chamber swab (30) after each round fired.
- 2. Change Step 31 to: Driver inspects cannon tube (31) and will announce BORE CLEAR after the last round of the mission.
- 3. Delete Step 32.
- 4. Renumber Step 33 as Step 32.

M60A1 AVLB Reclassification

he military load classification (MLC) for the armored vehicle launched bridge (AVLB) has changed.

Follow the PMCS in TM 5-2420-203-24 to completely inspect the bridge. If the bridge is fully mission capable, you can change the stencil marking in four places on the side of the bridge from 70 to 85, and the numbers on the loaddisk assemblies from 70 to 85.

The numbers on the load-disk are black, 5 inches tall and on a yellow background.

PS 719

Operators, cold weather is no excuse to chill on PM. If you do, you'll be hot under the collar if your Armored Security Vehicle (ASV) breaks down!

Your ASV should run fine if you follow the PMCS guidance in TM 9-2320-307-10. Here are some basics you need to follow.

PMCS Considerations

• Check the heating system before you go out on a mission. If it doesn't blow hot air, get your unit's maintenance folks to check the system for leaks.

Extreme Temperature Operations

- Check fluid levels daily. That includes the old lead-acid batteries that aren't maintenance-free.
- Check all batteries for cracks.
- Replace engine belts that show any sign of wear.
- Clean air filters and radiator fins daily.
- Wipe dirt away from the fuel tank lid before you open it. That keeps dirt from mixing with the fuel.
- Watch all gauges and indicator lights for proper readings.
- Cover the windows when they're not in use. That should prevent ice and snow from building up on them.

Recommended Fluids and Lubricants

- Engine lubricating oil is prescribed according to temperature ranges.
 Make sure you follow the engine lubrication guidance in TM 9-2320-307-10.
- Use OE 15W40 for your transmission.
- Use a mixture of 40% water and 60% antifreeze in the radiator, based on outside temps. Refer to your TM for specifics.
- Keep fuel tanks full during cold temperatures to prevent condensation that can turn into ice.

FMTV... Plugged Gladhand Can Lock Brakes

Resist the urge to plug a leaking front air system gladhand on your FMTV truck. If it's plugged, the parking brake won't be able to lock the spring brakes on the rear wheels.

The gladhands must vent as designed when the truck is placed in SYSTEM PARK so it won't roll away. Any plug used to seal off a gladhand takes away the venting.

If the spring brake system doesn't work right, the truck will roll when put in SYSTEM PARK. Then that truck you were sure would stay where you left it could end up really close to you—maybe too close!

So when you've got a front gladhand leak, get a mechanic to fix it. Most of the time, the problem can be fixed by servicing or replacing the one-way check valve inside the front gladhands.

Note that your truck's rear brake could also seize in freezing temperatures. If your rear brake seizes, check to see if there is snow or ice on the front bumper's service gladhand vent.

If there is, remove the snow and ice by lightly tapping the gladhand vent. That may solve the problem.

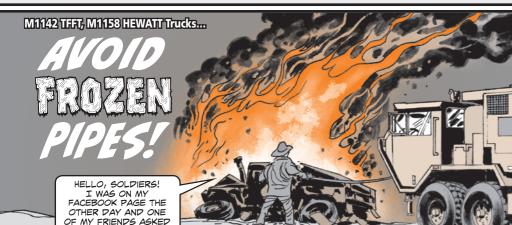

If it doesn't, wait about 10 minutes to see if that makes a difference. That short delay can sometimes produce good results.

Still have the brake problem? Time for a mechanic to do some brake troubleshooting.

HE WANTED US

DRIVERS, GET A MECHANIC TO FIX A GLADHAND LEAK, IT'S NOT YOUR JOB!

OCT 12

TO REMIND YOU FIREFIGHTING ENGINEERS THAT IT'S TIME TO BLOW OUT YOUR TACTICAL FIRE FIGHTING TRUCKS (TFFTS) AND HEMTT-BASED WATER TENDER TRUCKS (HEWATTS) BEFORE THE COLD WEATHER HITS.

IF YOU **DON'T** BLOW WATER OUT OF THE PUMP AND PIPES IN YOUR TFFT AND HEWATT TRUCKS, COLD WEATHER BELOW 32°F COULD **DAMAGE** THEM WHEN THEY AREN'T IN USE.

YOU CAN FIND THE BLOWOUT PROCE-PURES FOR THE TFFT IN WP 0044 OF TM 5-4210-249-13&P-1 (FEB 09).

BLOWOUT PROCEDURES FOR THE HEWATT ARE IN WP 0033 OF TM 9-2320-328-13&P-1 (MAR 09).

PS 719 14

US TO TALK ABOUT

FIREFIGHTING.

BUT IT'S NOT GREAT FOR YOUR WATER TRAILER!

WATER EXPANDS AS IT FREEZES.

OH! MY

PIPES!!

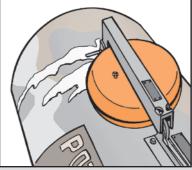

THAT MEANS THE

PLACE THE WATER TRAILER IN A SHELTER, ESPECIALLY IF THE TEMPERATURE IS BELOW O'F. A WARM TENT OR ANY SHELTER THAT HAS A
FIELD RANGE OR OTHER HEATER IN USE
IS BEST. AT THE VERY LEAST, KEEP THE
TRAILER COVERED WITH CANVAS.

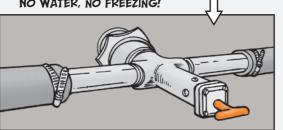

ALWAYS KEEP THE MANHOLE AND FILLER COVERS TIGHTLY CLOSED. THAT HELPS SEAL OUT COLD AIR.

AFTER EACH USE, DRAIN THE PIPES BY SHUTTING OFF THE WATER WITH THE MAIN T-VALVE IN FRONT OF THE TANK, THEN OPEN ALL OF THE FAUCETS. PROP THEM OPEN WITH A PIECE OF WOOD.

NO WATER, NO FREEZING!

Shut off ...or water pipes with may T-valve. burst!

> IF YOU'RE STORING THE WATER TRAILER, MAKE SURE YOU DRAIN ALL OF THE WATER REMAINING INSIDE.

PARK THE TRAILER ON A SLIGHT INCLINE SO THAT THE WATER IS TILTED TOWARD THE DRAIN PLUG.

OPEN ALL OF THE **FAUCETS** AND THE MAIN T-VALVE.

> THAT PREVENTS A VACUUM IN THE PIPES AND LETS ALL OF THE WATER DRAIN.

WHEN THE WATER STOPS DRAINING, DON'T ASSUME IT'S ALL GONE. OPEN THE MANHOLE COVER AND CHECK.

What to Do With a SMART Idea

Do you have a super solution to a pressing Army problem? Your ideas on supply, maintenance, transportation, food service or any other aspect of Army logistics are welcomed and encouraged.

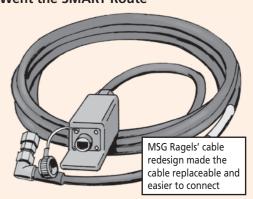

The only cost for you is the time it takes to jot down and submit an idea to the Army's Supply and Maintenance Assessment Review Team (SMART). The SMART team reviews and then assigns your idea to the right agency for evaluation.

Likewise, the Tools Improvement Program Suggestions (TIPS) also invites Army users to submit tool improvement suggestions directly to SMART for evaluation.

So if your logistics-related suggestion or tool tip can save the Army time, money or lives, it's worth sending in. Approved or even partially approved ideas can earn cash awards.

Winner Went the SMART Route

MSG Lathe Ragels with the National Guard's HHB 1/147th field artillery battalion in Watertown, SD, was awarded \$5,000 for his cable upgrade idea on the field artillery data system computer. He figured out a connector redesign that makes it possible to replace expensive, non-reparable cables with standard cables. The new cable set-up is also easier to connect. His idea is now being implemented Army-wide.

General SMART Tips and Guidelines

The best SMART suggestions often solve everyday problems. They include solutions that fix issues requiring extra man-hours to repair and alternatives to items or components that are expensive and/or impossible to fix.

You won't have to look far to find problems that need solving—they're everywhere. The real issue is that many of us are in the habit of just coping with a recurring problem. But odds are that if one Soldier is having a problem with supply, equipment or maintenance procedures, so are others! Now's the time to share your solution.

When you submit your SMART idea, include the following:

- Problem title (your choice)
- NSN (end item NSN)
- End item information (what is the end item?)
- References (TM, part numbers, etc.)
- Current procedure (and the problem with it). Please include parts/NSNs, if applicable.
- Recommendation (your suggested fix for the problem with the current procedure). Be as specific as possible. Include any cost savings estimates that might be realized with your solution.
- You may attach files to your suggestion that contain pictures, sketches, charts, etc., to better illustrate your suggestion. The total file size should not exceed 5 MB.

Download the SMART handbook online and use it to help prepare your submission. Visit the SMART website to submit your suggestion:

https://smart.lia.army.mil/smart/smarthome.cfm

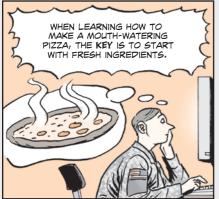

After you submit your suggestion to SMART, you can:

- track its status on the website.
- receive email updates during the SMART evaluation process.
- resubmit a rejected suggestion within 60 days, if the original evaluation did not take essential information into consideration.

If you have questions, visit the website or contact the SMART team at DSN 687-0595/0485, (804) 734-0595/(804) 734-0485, or email:

christopher.s.cigal.civ@mail.mil or kim.a.powers2.civ@mail.mil

WTSPs Keep Training Current

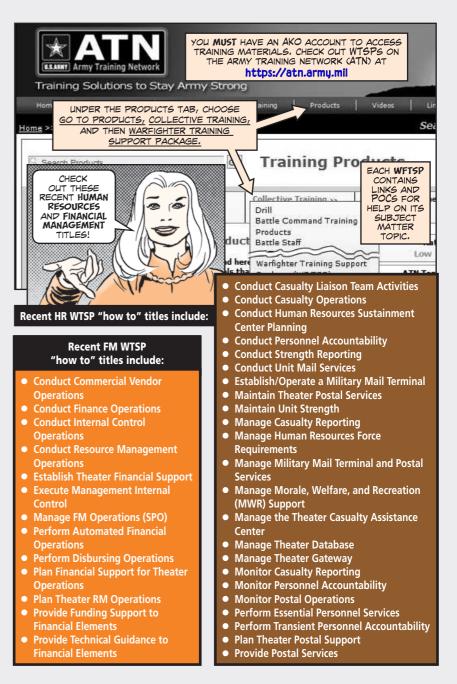

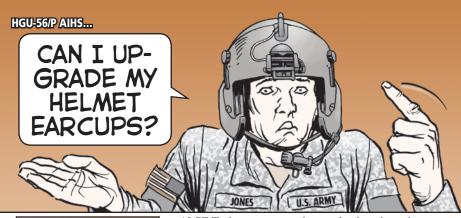

Training evolves as rapidly as the Army's technology. So why risk using outdated training materials in your unit when you can click a mouse and get the latest and greatest ones?

The Soldier Support Institute offers Human Resources (HR) and Financial Management (FM) Warfighter Training Support Packages (WTSPs) on the Army Training Network (ATN).

The WTSPs have the most up-to-date training materials available, and are updated automatically online whenever source files are revised. Each WTSP includes collective and individual tasks, lesson plans/PowerPoint slides, practical exercises, handouts, and reference materials.

PS 719 20 OCT 12

ALSE Techs, no matter what you've heard out there in the helmet world, the aircrew integrated helmet system (AIHS) earcup configuration cannot be altered.

The stock earcup is the only authorized cup for your helmet. That's because it was designed, developed and qualified as a crushable earcup that absorbs energy and protects your noggin in case of a helicopter crash. The bottom line is the standard configuration lowers aviator's risk of skull fractures and death.

The hushkit and softseal combo earcup replacements should not be used on HGP-56/P helmets because they have **not** been tested for crash worthiness. Everything you need is listed in WP 0065 00 of TM 1-1680-377-13&P-1.

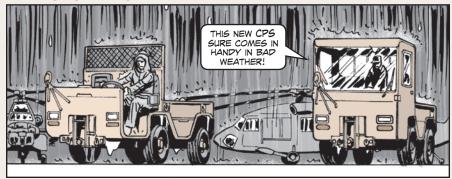

(In Page 23 of PS 709 (Dec 11), we told you that the old standard tug and the John Deere tug are taking a hike. They are being replaced by a new tug called the standard aircraft towing system (SATS), NSN 1740-01-575-5662.

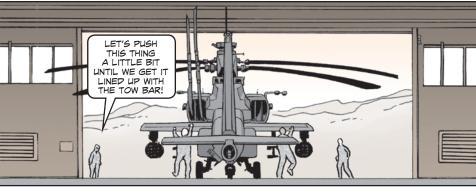

Well, here's some more good news! The SATS now has a full-length crew protection system (CPS) to protect its occupants. If you have a SATS without a CPS, don't worry. It will be upgraded with the new CPS soon. You'll be able to tow aircraft without being exposed to the elements while moving around on the flight line.

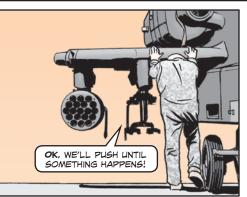

So while you wait for your upgrade to come in, keep up on the good maintenance and PMCS found in TM 1-1740-221-13&P.

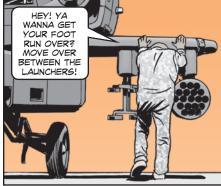

Make a note that the TM is being revised to include the CPS along with updates to the repair parts and special tools list (RPSTL).

AH-64D... Moving Your Aircraft

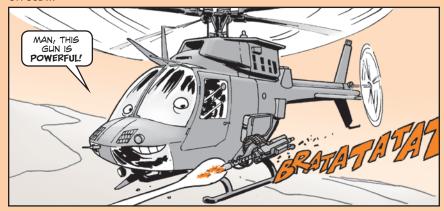

echanics, your AH-64 aircraft is not a lightweight. So position yourself correctly if you have to use brute strength to move it slightly.

When aircraft sit lined up in a hangar, there are times when there is no room to maneuver with a towbar and tug to remove the aircraft. So your only option is to push the aircraft to a position where towing is possible.

Pushing takes a minimum of five people: One to ride the brakes, two to wing watch, and two on both sides of the helicopter (using more reduces the risk of injury). The trick is where to position yourself on the stubby wings. Push the aircraft between the missile launcher and the rocket launcher using the stubby wings. If you wedge yourself between the inner pylon and the EFAB, you'll get your feet run over by the tires.

Put some muscle and your back into it and push until something happens (P.U.S.H.). After you've moved the aircraft into the open, attach the towbar and tug to finish moving the aircraft.

INSPECT YOUR AIRCRAFT

Pilots, now that the Kiowa Warrior has the new M3P .50 cal machine gun, NSN 1005-01-303-5250, strapped to its pylon, things just got a little more interesting.

After each firing of the gun, check your aircraft chin bubble and the area around the static port for damage.

Unlike the old M296 .50 cal machine gun with its shorter barrel, the M3P gun's longer barrel, plus vibration and rapid firing, can cause cracks in the chin bubble. Any time the gun is fired, it sends out powerful shock waves. The chin bubble on the pilot's side of the aircraft takes the brunt of the rapid firing of 1,100 rounds per minute.

If you find cracks in the chin bubble, call your airframe shop to fix the cracks or replace the chin bubble. They may also need to repair the aircraft skin if there's damage.

HH-60...

GOT A LAGAT BUDDY?

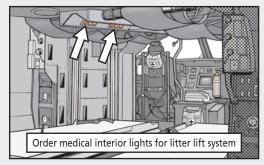

Tired of holding a mini-light in your teeth? If you've been looking for light bulbs or dome light assemblies for the interior in the medical Black Hawk, look no further.

For **light bulbs**, order NSN 6240-12-344-8188, which brings you a single halogen light bulb.

Dome assemblies? NSN 6220-12-381-0172 brings you the twobulb dome light assembly found in the medical side panels.

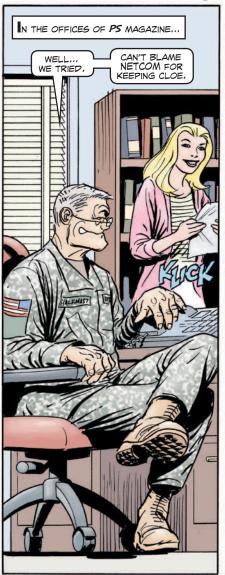

NSN 6220-01-569-0543 gets you the **three-bulb dome assembly** used in the center overhead light bar and the left/right aft facing controls panels.

Want to decrease your workload? When replacing a halogen bulb, do not touch the bulb with your bare hands. The oils from your skin will damage the quartz surface when the light is turned on.

Always handle halogen bulbs with a clean towel or clean, lint-free cloth. If you accidentally touch a bulb with your bare hands, clean it with rubbing alcohol, NSN 6505-00-656-8366, and ensure it is dry it before installation. Keeping it clean will light up your world!

2012: a Logistics Odyssey

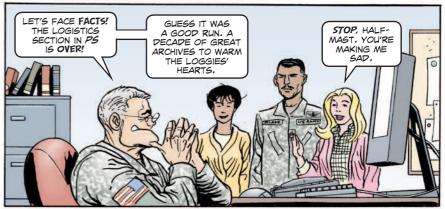

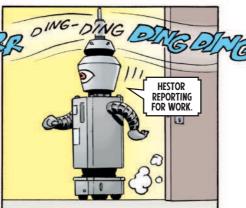

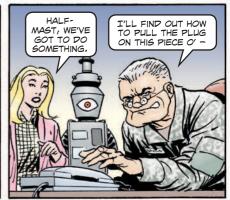

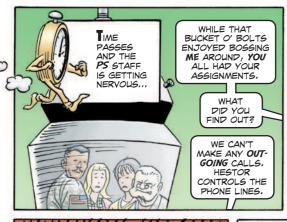

31

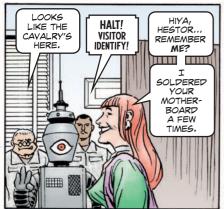

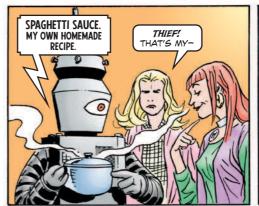

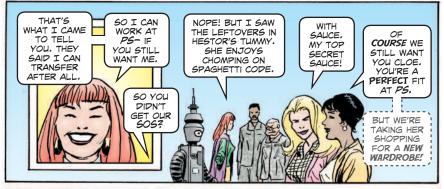

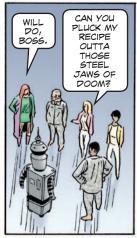

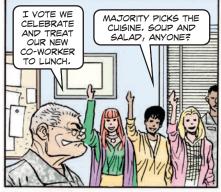

PS 719 32 OCT 12 PS 719 33 OCT 12

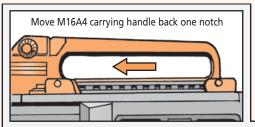

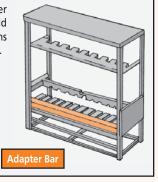

The M12 rack, NSN 1095-00-407-0674, for the M16 rifle and M4/M4A1 carbine won't hold the M16A4 or M4A1 unless you modify the rack first.

To lock M4A1s in the M12 rack, you need an adapter bar on the rear of the arms rack. Your support (or field maintenance) makes the bar following the instructions beginning in WP 0036-1 in TM 9-1005-319-23&P (Nov 08).

To lock an M16A4 with a carrying handle in the M12 rack, you may need to move the carrying handle back one notch to the rear. The carrying handle must be returned to the original position for firing to maintain the zero.

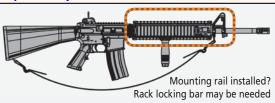

The standard adapter rail system installed on the M16A4 or M4/M4A1 will prevent the rack from closing. In that case, a single locking bar is needed. To get instructions for fabricating a single locking bar, contact TACOM's Gene Meade at DSN 786-1277, (586) 282-1277 or email:

eugene.v.meade2.civ@mail.mil

or John Kelty at DSN 786-1275, (586) 282-1275, or email:

john.m.kelty.civ@mail.mil

Any M12 racks that are fitted with the adapter bar or single locking bar must be certified as secure. Contact your local TACOM logistics assistance representative for details.

Small Arms... Racks for the Arms Room

Here's what is available from Secureit®...

24-rifle and 24-pistol storage cabinet:

Features adjustable saddle system with 12 bins with dividers for handguns or optics. Bi-fold door version comes with NSN 1095-01-599-5325 and retractable door version with NSN 1095-01-599-4882.

Crew-served weapon storage cabinet:

Can hold four M2s or MK 19s or six M240/M249s or six M107 sniper rifles, plus the spare barrels. Features adjustable saddle system with three shelves. Bi-fold door cabinet, NSN 1095-01-599-4865. Retractable door cabinet, NSN 1095-01-599-4878.

Handgun, optics and gear storage cabinet:

Can store 120 pistols, optics, NVGs, or radios, Features 60 bins with removable dividers. Bi-fold door cabinet, NSN 1095-01-599-4871. Retractable door cabinet, NSN 1095-01-599-4886.

High density pistol peg storage cabinet:

Stores 220 handguns on steel peg system that protects the barrel and prevents weapons from being stored with a round in the chamber. Bi-fold door cabinet, NSN 1095-01-599-4782. Retractable door cabinet, NSN 1095-01-599-4887.

Machine gun storage cabinet:

Stores 12 M249s or six M240s and six M249s with each weapon on a single shelf. Bi-fold door cabinet, NSN 1095-01-599-4868. Retractable door cabinet, NSN 1095-01-599-4880.

For more information about SecureIt® racks, call (800) 651-8835 or go to: http://www.secureittactical.com

Marvel®

- factory assembled and ready to use
- Ouicklok® system gives onehanded entry into the rack
- rounded diamond pattern allows for inventory without opening racks
- holes in bottom rear corners of racks make it easy to run a chain through several racks for added security
- racks do not need to be certified by your local TACOM LAR
- racks carry a limited lifetime warrantv
- Marvel® provides free onsite consultation

For more information, call (800) 862-7835 or visit: http://www. universalweaponracks.com

For a list of the racks available from SpaceSaver, Stanley Vidmar, and WAR-TAC, see Pages 24-26 of PS 692 (Jul

https://www.logsa.army.mil/ psmag/archives/PS2010/ 692/692-24-26.pdf

NSN 1095-01-	Weapons held

Check Bipod for Slippage

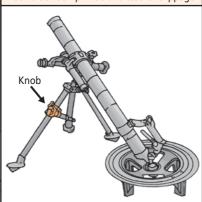

HEY! THOSE LAST MISSES WEREN'T MY FAULT! MY BIPOD'S STARTING TO SLIP! SOME-BODY HELP ME!

SOME M170A1
BIPODS FOR THE
NEW M224A1
MORTAR AREN'T
STAYING LOCKED
IN POSITION.

Operators, test immediately any M170A1 bipods, NSN 1010-01-561-9234, in your unit for slippage of the cross-leveling mechanism. With either the M224A1 fully assembled or the bipod standing alone, tighten the clamping block's locking knob. Lift up on the block clamp while checking for movement along the bipod's leg.

Lock block clamp knob and test for slippage

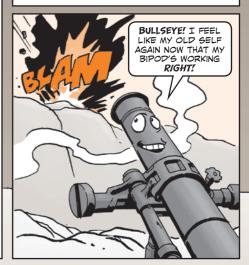

If the bipod won't stay in the clamped position, your mortar is NMC. Send it to support. Support should inspect and possibly repair the clamping block. The problem is usually a stripped machine screw (Item 6 in Fig 17 of TM 9-1010-233-23&P). TACOM will provide a repair kit that includes the screw.

Slippage may be caused by stripped machine screw in block clamp

See TACOM maintenance action message 12-024 for more info:

https://tulsa.tacom.army.mil/SAFETY/ message.cfm?id=MA12-024.html

Questions? Contact TACOM's Michelle Heinrich at DSN 786-1222, (586) 282-1222, or email michelle.n.heinrich.civ@mail.mil

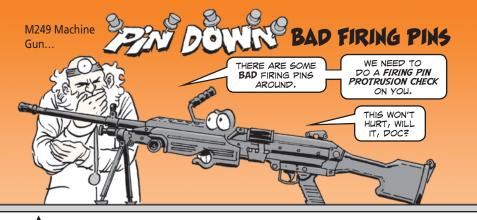

A big change has happened with the mannequin target, NSN 6920-01-164-9625, armorers. Previously that NSN brought one—just one—target. But now that NSN brings 35 targets at a cost of about \$450. The unit of issue has changed from EA to BX (35).

So unless you want to end up with enough targets for a lifetime and a hefty bill, remember this change in quantity when you put in your next target order.

If you've already made the mistake of ordering way more mannequins that you need, you can get the extras shipped back. Contact Cathy Boultinghouse at DSN 786-1363, (586) 282-1363, or email:

catherine.j.boultinghouse.civ@mail.mil

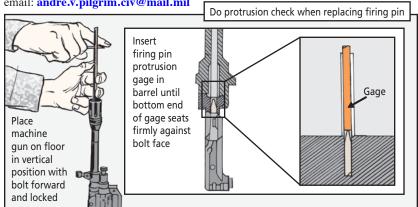

A small number of bad M249 machine gun firing pins have gotten into the field. The bad pins may not protrude completely through the bolt or may protrude too far, causing probable misfires.

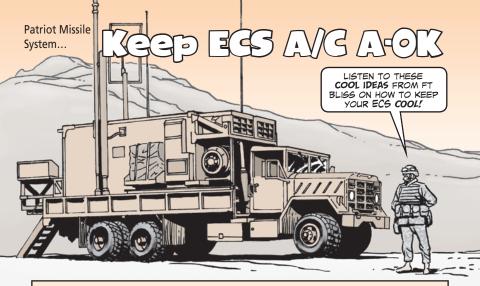

Armorers need to check all their replacement firing pins for a CAGE code of 19204 on their packages. If these pins are dated on or before December 2011, they should be demilled.

But any time you replace an M249 firing pin, do the protrusion check on Page 3-54 of TM 9-1005-201-23&P (Jun 02). That way you know you're installing a good firing pin.

1005011285705
-1005 01-128-5705
CAGE 19204-PN:9348395
PIN: FIBING

Questions? Contact TACOM's Andre Pilgrim at DSN 786-1256, (586) 282-1256, or email: andre.v.pilgrim.civ@mail.mil

Dear Editor,

Through our experience keeping the Patriots at Ft Bliss primed for action, we've come up with a few ways to ensure the engagement control station's (ECS) air conditioning stays A-OK:

Run one A/C unit at a time.

The ECS has two A/C units, but running them both at the same time actually hurts their effectiveness. Running both causes back pressure to build up in the van, which means the units work harder and against each another. A very good way to help the units last is to run the units one at a time. Just alternate them every two hours.

Check that condensation is draining out of the A/C units at least daily.

If condensation can't properly drain, the A/C will eventually shut down and that shuts down the ECS. If any kind of work has been done on the A/C, make sure the elbow fittings where the drain hoses connect point down. If they don't, condensation can't drain properly. For the same reason, check that the drain hoses aren't kinked.

But sometimes a drain hose plugs up and the condensation backs up. The easiest fix is to suck on the end of the hose to clear it, which of course isn't very sanitary. So instead, disconnect the drain hose and blow it out with an air hose.

CWZ Michael Smith SGT Joshua Rogers SPC Nicholas Griffin 2/43 ADA Ft Blies, TX

Editor's note: You've just made things much cooler for the ECS with your cool suggestions.

HERE'S THE
RUBBING ALCOHOL!
I'LL HAVE YOU
CLEANED UP IN A
JIFF!

ISOPROPYL ALCOHOL IS WHAT I NEED!

Dear Half-Mast,
On Page 59 in PS 712
(March 12), you said to use only isopropyl alcohol to clean inside the Sentinel's compartments. Rubbing alcohol shouldn't be used because it removes the protective coating on the compartments' walls, which leads to corrosion and arcing. What I find confusing is that rubbing alcohol is mostly isopropyl. Please clarify this.

SFC James Bishop CAARNG Stockton, CA Dear Sergeant Bishop,

We are always glad to clarify.

Rubbing alcohol does indeed contain 70 percent isopropyl. It's the acetone that makes up the other 30 percent that causes the problem. Acetone is what strips off the protective coating.

TM 9-1430-Sentinel (1 Apr 2010) says to use technical isopropyl alcohol, NSN 6810-00-753-4993, for cleaning because it's 70 percent isopropyl and 30 percent water. No acetone,

no problem.

M40/M42-Series Masks...

NOSECUP **PARTS** REVERSED EVERSED

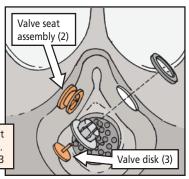

ин-он! THEY MADE M40

A MISTAKE ON MY NOSECUP PARTS. I GOTTA GET THIS STRAIGHTENED

Dear Editor,

I noticed in the M40/M42 mask's TM 3-4240-346-23&P (Aug 10), the nosecup valve disk and the nosecup valve seat assembly are reversed in both Fig 2 and Fig 4 of WP 0031. The valve seat assembly is actually Item 2 in both figures and the valve disk is Item 3. I've submitted a DA Form 2028, but CBRN specialists might want to correct their TMs in the meantime.

MSG Andrew Wilde MOARNG Jefferson City, MO Nosecup valve seat assembly is Item 2. Valve disk is Item 3

Editor's note: Good eye, Master Sergeant. CBRN specialists, make a note of this correction to save yourself parts confusion.

M1135 NBCRV Stryker...

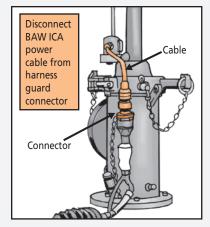

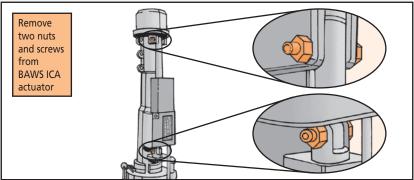

IF THERE IS A FAILED ELECTRONIC ACTUATOR WHILE OPERATING THE NBC RECONNAISSANCE VEHICLE (NBCRV), YOU MUST MANUALLY **OPEN** THE BIOLOGICAL AGENT WARNING SENSOR (BAWS) INTAKE CLOSURE ASSEMBLY (ICA).

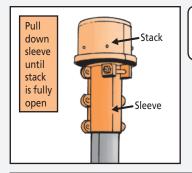

UNFORTUNATELY THE NBCRV'S TM DOESN'T EXPLAIN HOW, TURN THE PAGE TO FIND OUT!

- Disconnect the BAWS ICA power cable from the harness guard connector.
- Put the protective cap on the connector.
- Use a cross-tip screwdriver and a
 ⁷/₁₆ box-and-open-end wrench to
 remove the two nuts and screws from
 the BAWS ICA actuator.
- Remove the actuator from the BAWS ICA stack and put it in stowage.
- Reinstall the two screws and two nuts on the BAWS ICA stack.
- Pull down the sleeve of the stack until the stack is fully open.
- Continue the mission and notify field maintenance as soon as possible.

For more info, check out TACOM Maintenance Information message 12-012: https://tulsa.tacom.army.mil/safety/mam/tacom_wn/Mi12-012.html

New Tool Cart Avallable

Here are some of the features of the cart:

- Tool chest can easily be positioned in the top or bottom of the MCAT
- Removable mounting rails provide a large, versatile work surface area
- Recessed area for small parts and hardware
- Side work surface with a 50-lb capacity can be mounted on either side of MCAT at two height locations
- Two roller-bearing slide drawers, each with 75-lb capacity, can be locked with a bar
- Powder-coated, 14-gauge industrial grade steel with welded construction can withstand harsh environments

- 8-in semi-pneumatic wheels provide easy movement and 1,000-lb load rating
- Large, open bottom for multiple storage options
- Push handle can be mounted on either side

Accessories available for the MCAT include:

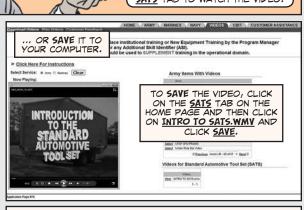

- laptop stand
- creeper
- magnetic tool holder
- third drawer
- power strip
- mechanic's rolling stool
- fully pneumatic tires
- multi-cavity drawer organizer
- other accessories available

Order the MCAT using NSN 5140-01-586-3669. For more info about the MCAT, contact Armstrong Tools at 1-800-234-0838, or email: militarytools@apextoolgroup.com

TACOM-LCMC.ILSC_UTAP@mail.mil

Dear Half-Mast,
We recently got an
SECM (shop equipment,
contact maintenance)
that is missing the
foam inserts for its
drawers. Without the
inserts, it's difficult to
organize the tools and
do inventory. We've
looked all through TM
9-4940-563-13&P
and can't find anything
on getting new inserts.
Can you help?

SFC P.H.

Dear Sergeant P.H.,

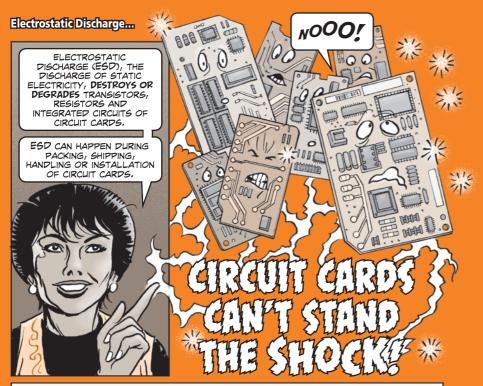

Of course I can help. Order new inserts at https://pmskot.army.mil using PN SECMLT-FM. This brings the whole set of inserts.

To order SECM tools, you need to identify which SECM you have. NSN 4940-01-333-8470/8471 is identified on the PM-SKOT website as SECM heavy. NSN 4940-01-548-9064 is SECM lightweight. You can then search the site for tools by part number or description or you can search through the tool listing for each SKO.

If you still have problems, contact PM-SKOT at (877) 476-7568 or email:

usarmy.detroit.peo-cs-css.mail.pm-skot@mail.mil

Half-Mast-

What Causes ESD?

ESD comes from electrically charged objects in your work area: Clothing, rugs, chairs, paper, ordinary packaging materials, or the work surface itself.

But the main source of ESD is you. You build up thousands of volts of static electricity by doing things like walking across the floor or combing your hair. Then, just by touching a circuit card, you'll discharge static electricity, often without realizing it.

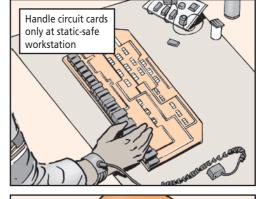

A spark as little as 30 volts ruins a sensitive electronic device. You may not feel the discharge or see the damage, but you can bet it has happened. The circuit card may fail now or be weakened enough to fail later.

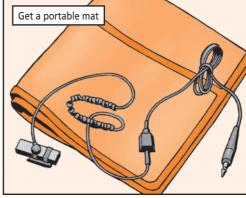

Static-safe Workstations

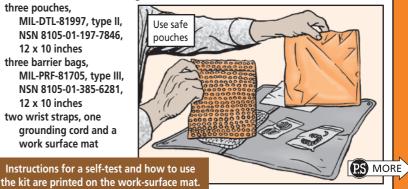

Protect your circuit cards from ESD. Handle them only at a static-safe workstation that includes a grounded, static-dissipative table mat, floor mat and wrist strap. They are designed to limit static buildup and carry already existing charges to ground. Here's what's generally available:

- NSN 5920-01-250-4236 will bring you a staticdissipative table mat, common point ground system, and an adjustable wrist strap for use in all areas other than clean rooms or laminar flow booths.
- NSN 5920-01-250-4237 gets you a portable work surface, common point ground system, and an adjustable wrist strap for use where other static control stations are not available.

- NSN 5920-01-253-5368 brings a **field service kit** that has:
 - three pouches, MIL-DTL-81997, type II, NSN 8105-01-197-7846. 12 x 10 inches
 - three barrier bags, MIL-PRF-81705, type III, NSN 8105-01-385-6281. 12 x 10 inches
 - two wrist straps, one grounding cord and a work surface mat

48 **PS** 719 **OCT 12** IF YOU'RE GOING TO BE PACKAGING ESP SENSITIVE (ESPS) CIRCUIT CARPS, HERE ARE A COUPLE OF WAYS TO PROTECT THEM...

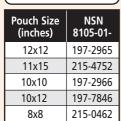

HEAT SEAL THE BAG WITH A HANDHELD SEALER, NSN 3540-01-456-4286.

IF THE PIECE OF ELECTRONIC EQUIPMENT IS SMALL ENOUGH, PUT IT INTO ONE OF THESE ESD-FREE FLEXIBLE CUSHION POUCHES...

Use flexible cushion pouches

Whichever way you go, finish the job with a fast pack. NSN 8115-01-019-4084 brings you an ESD fast pack that measures 12 x 18 x 3 1 /2 inches. NSN 8115-01-057-1244 brings you an ESD fast pack that measures 10 x 10 x 3 1 /2 inches.

There's much more to know about packaging, and you can get the word from LOGSAP 746-1, *Packaging—The Basics*.

To get your copy, write to: LOGSA PSCC ATTN: AMXLS-AT-P 11 Hap Arnold Blvd Tobyhanna, PA 18466-5097

Or call DSN 795-7763,

(570) 615-7763, or email:

toby.pt@us.army.mil

You can also download a copy from the LOGSA website:

https://www.logsa.army.mil/ index.cfm

From the home page, expand the <u>Publications</u> link on the banner across the top of the screen. The link to <u>Packaging—The Basics</u> is at the bottom.

High Charge

The slow discharge path of a static-safe workstation can protect your circuit card from discharging conductors such as metal or your body. Unfortunately, a workstation can't protect against common, highly charged, non-conducting items. Candy wrappers, folders, paper, foam cups, cigarette packs, plastic and masking tape, plastics, vinyl, heat guns with blowers and common packing material can have a high static charge. Keep them away from the work site.

PS 719 51 OCT 12

- Direct contact between the circuit card and the charged item triggers a discharge. A sudden flow of electric current rushes from the charged item and through the card's circuitry.
- A circuit card is placed near a charged item—a foam cup, for example. The cup could have a static charge of up to 20,000 volts. And that charge creates an electrostatic field. If the circuit card lies within the field, it takes on a charge. The damage comes later, when an unsuspecting technician reconnects (grounds) the card. BAM! The card is zapped by its own discharge as surely as if it were touched directly by the charged foam cup.

A FEW
PRECAUTIONS
AND REGULAR PM
AROUND YOUR
WORKSTATION WILL
KEEP HIGH STATIC
ELECTRICITY
UNDER CONTROL...

- Keep clutter away.
- When you leave your workstation, keep the circuit card protected, even if you're coming right back. Put it in an ESD-free pouch or wrap it in static-shielding barrier material.
- If you must have technical manuals and paperwork at the workstation, store them in anti-static bags. Put an ESDsafe rubber band or conductive ESDsafe tape around the bag. Never use ordinary tape or ordinary rubber bands to fasten it. The tape and rubber hold static electricity.
- Magnets, radios and telephones can create an electromagnetic field. Keep them clear of the workstation.

 If you must package an item in stretchwrap or shrinkwrap, do it away from your workstation. Packaging an item with these materials generates static electricity.

Clean Means Safe

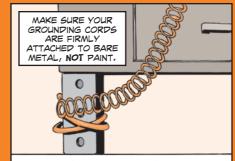

Dirt and dust on the table and floor mats act as insulators, making it harder for the mats to carry electrical charges to ground. Clean the mats with a soft cloth, or brush them with a whisk broom.

Use only brushes made with natural bristles, such as horse hair. Brushes made with nylon or other synthetic bristles will generate static electricity.

Never wax or polish the table or floor mats. That leaves a residue that insulates the mats.

PS 719 52 OCT 12

Resistance Checks

Follow the manufacturer's instructions for measuring the resistance of your workstation components. That's the only way to be sure your workstation's doing its job of carrying static charges to ground.

Measure the mat's resistance with a test kit for static control surfaces. Get the kit from the GSA Advantage website: https://www.gsaadvantage.gov/ From the home page, do a search on the test kit's part numbers: 701C.

Measuring resistance in the wrist strap is especially important. The strap takes more wear and tear than any other part of your workstation. Measure it at least daily. Get a wrist strap tester with NSN 4940-01-388-1693. Order it on a DD Form 1348-6 from RIC SMS and put "NSN not on AMDF" in the REMARKS block.

The wrist strap has a resistor to protect you against high-voltage shocks. If the resistance is too low, the strap can't protect you. Too much resistance means the strap can't draw static electricity away from your body. Either way, you'll need to replace it.

Have your workstation tested for resistance from the surface of the table or floor mats to ground. That takes special testing equipment and special support. Contact your local TMDE support folks or a CECOM LCMC LAR for help.

For more information on ESD protection, see these publications:

Logistics Management... Name Changes to PM DCGS-A Systems

Program Manager (PM) Distributed Common Ground System-Army (DCGS-A) recently adopted a new naming convention for its systems. Make note that these systems now have new names in FED LOG, SLAMIS and other Army cataloging databases. To maintain systems accountability, units should update their records to reflect the new names. See the table below for details:

LIN	Old name	New name
A35397	All Source Analysis System: AN/TYQ-93(V)4 (DCGS-A IFS)	Server, Intelligence Fusion: AN/TYQ-94 (DCGS-A IFS)
A35329	All Source Analysis System: AN/TYQ-93(V)2 (DCGS-A PMFWS)	Workstation, Portable Multifunction: AN/TYQ-93 (DCGS-A PMFWS)
A53063	Analysis and Control Element (ACE)	Processing Center, Intelligence Version 1: AN/TYQ-90 (DCGS-A IPC-1)
C18176	Analysis Control Team—Enclave (ACT-E)	Processing Center, Intelligence Version 2: AN/TYQ-103(DCGS-A IPC-2)
D11498	Digital Topographic Support System—Deployable (DTSS-D)	Workstation, Geospatial Intelligence: AN/TYQ-71 (DCGS-A GWS)
S68285	Surveillance Intelligence Processing Center (SIPC)	Ground Station, Operational Intelligence: AN/TYQ-224 (DCGS-A OGS)
T37036	Common Ground Station (CGS)	Ground Station, Tactical Intelligence: AN/TSQ-179B (DCGS-A TGS)

LIA Rolling Out Enhanced EPIC

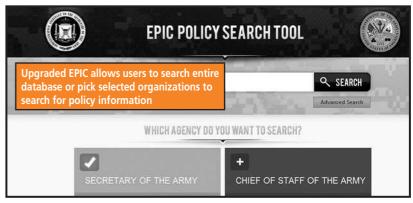

n 2010, the Logistics Innovation Agency (LIA), a field operating agency of Army G-4, launched the Enterprise Policy Interactive Capability (EPIC) to help Army logisticians quickly find G-4 administrative publications. We told you about it on Pages 56-57 in PS 694 (Sep 10).

The web-based, quick-reference tool was designed to save logisticians time searching for relevant pieces of policy from Army Regulations, Army Pamphlets, Army All Army Activities (ALARACTs) and DOD transportation regulations (DTRs).

Now LIA, with the sponsorship from the Office of the Administrative Assistant to the Secretary of the Army, has developed an enhanced version of their policy search tool that includes administrative publications for the entire Army.

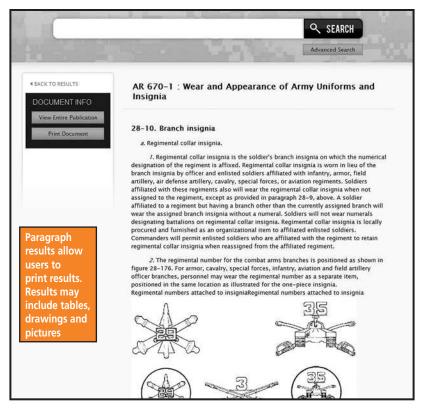

Just like the original logistics version, this enhanced EPIC version functions like popular commercial search engines, but concentrates its searches on Army and DOD policy publications.

Users are able to search by words or phrases and the tool will retrieve relevant paragraph(s) or ALARACT(s).

PS 719 59 OCT 12

Policies can be grouped by administrative types (regulations, PAMS, ALARACTS, etc.). EPIC also allows users to save or print their results.

Now users from the various staff elements (Secretary of the Army staff, G-1, G-2, etc.) will be able to cross-check policies with other Army staff to ensure policies on similar subjects don't conflict with each other.

For instance, if G-1 has a policy on clothing items, G-1 staffers will be able to see policies from other staff elements on the same subject.

This enhanced version of EPIC will start to be released by the end of FY12.

Check out the enhanced EPIC at:

https://epic.lia.army.mil/

For more information about EPIC, contact Donna Huggins at DSN 771-6037, (717) 770-6037, email:

AH~64 Night Flying Smoke Visor

Listen up Apache ALSE techs. If you need a tinted visor lens better known as the smoke lens for the AH-64's integrated helmet and display sight system (IHADSS) NVG visor, order NSN 1270-01-584-9443. You'll also need a clear lens, NSN 1270-01-584-4912, for night flying. Just be prepared to cough up 564 greenbacks for each of the two lenses.

HMMWV Legacy Group Email Address Change

Got issues or concerns about your unit's legacy HMMWVs? TACOM LCMC can help. Just make sure you're using their new email address. It's been changed to:

M871A3 Semitrailer Converter Box

If you order an electrical converter box, NSN 6130-01-504-7552, for your M871A3 22-ton flatbed semitrailer, you'll get a bit of a surprise. Instead of the old box that's shown as Item 1 in Fig 4 of TM 9-2330-326-14&P (Feb 06), you'll get a newly redesigned one that helps keep out water and has a special door for easy-access maintenance. Best of all, installation doesn't require any mechanical or electrical modifications. Order the new box only when the old one needs to be replaced.

M1-Series Tank Fuel Nozzle Studs

Pages 2-3 of PS 703 (Jun 11) told you about some new studs that can be used to align and hold the fuel nozzle when attaching it to the combustor cover on your M1-series tank engine. Turns out the thread size on those studs is larger than the existing holes on the combustor cover. So installing the studs is now a depot-level task.

AN/PVS·14 Single Battery Compartment

After a long wait, the single battery compartment, NSN 5855-01-523-4058, for the AN/PVS-14 night vision device is now available. The NSN is in FED LOG with an AAC of B. The AN/PVS-14 double battery compartment, NSN 5855-01-444-1233, is a terminal item. Call the CECOM LCMC inventory manager, Allison Dutton, if you have questions: DSN 648-1408, (443) 395-1408, or email:

allison.m.dutton.civ@mail.mil

DISTRIBUTION: To be distributed in accordance with the initial distribution number (IDN) 340312, requirements for TB 43-PS-Series.
